A common type of CII relates to subject-matter where all the method steps can fully be carried out by computer program instructions running on means which, in the context of the invention, provide generic data processing functions. Such means can, for example, be embedded in a personal computer, smartphone, printer etc.

The term electronic data processing dates back to the 1960s when automation began to replace manual data processing tasks. In modern times, the term tends to be associated with large scale automation of administrative tasks. In other words, "data processing" sounds like it could be a small one-time task but "electronic data
