BillySoft Academy | Mikrotik Router Tutorials

Connect your device to your computer using an Ethernet cable directly (without any other devices in-between), plug the Ethernet cable into your device's Etherboot port. Most commonly, RouterBOARD devices are able to use Netinstall from their first port (Ether1), or from the port marked with "BOOT".

Manual:Netinstall - MikroTik Wiki

Use double-sided tape to stick the template onto the wood. Use enough tape to keep the template in place, but not so much that it will be difficult to remove the template from the project. Cut the inside of the template using a plunge router with a template guide and fluted bit. Cut clockwise when making an inside cut.
