Imagine that the fluid injected into a mold is water rather than plastic resin. In a properly vented mold, the water, following the path of least resistance, will quickly and uniformly fill every nook and cranny regardless of the shape and size of the mold's features.

Mold cavities, vents and gate placement will vary based not only on the part design but the type of resin as well. Taking all of these manufacturing factors into account is a challenging task and one that requires a strong knowledge base, not only of mold design but the injection molding process as well.

Design Engineering in Plastic Injection

By David Kazmer

Even Simple Parts Can Require Complex Mold Design At its simplest, injection molding is about orienting cavities in three-dimensional space with a parting line that allows free ejection of the cooled, solid resin parts.

Simply determining the location of the parting line can be nontrivial.
