A logarithm is basically an exponent. In the equation $10^x = 100$, writing $\log_{10}(100)$ is how you solve for x ; \log is short for logarithm (in this case, $x = 2$). Comparing numbers with logarithms is a high school and college-level topic, but people use logarithms instinctively. As an example that logarithms are instinctive — the distance between 1 and 1,000 doesn't feel all

Comparing with Logarithms for Common Core Math - dummies

Common logarithm; The other popular form of a logarithm is the common logarithm with the base of 10, $\log_{10}x$, which is conventionally denoted as $\lg(x)$. It is also known as the decimal logarithm, the decadic logarithm, the standard logarithm or the Briggsian logarithm, named after Henry Briggs, an English mathematician who developed its use.
