Wikibooks is a useful resource if you’re curious about a subject, but you couldn’t reference it in academic work. It’s also worth noting that although Wikibooks’ editors are sharp-eyed, some less scrupulous contributors may plagiarize copyright-protected work by other authors. Some recipes, for example, appear to be paraphrased from well-known chefs.

Why Buildings Fall Down How

The stories that make up Why Buildings Fall Down are in the end very human ones, tales of the interaction of people and nature, of architects, engineers, builders, materials, and natural forces all coming together in sometimes dramatic (and always instructive) ways. B/W line drawings

Why buildings fall down : how structures fail ...

Buildings constructed on either soft soil or on steeply sloped sites in a seismic zone, therefore, are at special risk. When an earthquake hits, it’s as if they are being shaken back and forth in a pool of Jell-O. When the shaking finally stops, these buildings are sometimes found slumping into the soil.

Five reasons buildings fail in an earthquake—and how to ...

Buildings have fallen throughout history whether made of wood, steel, reinforced concrete, or stone. But these failures do respect the laws of physics. All are the result of static load or dynamic forces, earthquakes, temperature changes, uneven settlements of the soil, or other unforeseen forces.
